

NeuroReach

EEG-BASED
REHABILITATION GAME

powered by **THALis-Micro**

— Help Shape the Future of Motor Rehabilitation —

Recovering arm and hand function after a stroke often requires hundreds of repetitive practice attempts over many months. While therapy is essential, many stroke survivors have limited opportunities for intensive practice outside of scheduled sessions.

Enter **NeuroReach:** a new therapy tool using brain activity (EEG) and interactive games to make upper limb rehab more engaging. We are building this to complement traditional therapy, and we need your input as we prepare for our first clinical pilots.

[**Learn More on our Website!**]

We are interested in connecting with **occupational therapists, physical therapists, rehabilitation clinics, senior living communities, and other organizations** that may be interested in learning more about NeuroReach or exploring future pilot opportunities.

Whether you're a stroke survivor, caregiver, healthcare professional, or simply know someone who may be interested, we'd love to hear from you!

Want to try out NeuroReach? To learn more or express interest, please contact:
